EDUCATION

GEORGIA INSTITUTE OF TECHNOLOGY

M.S. in Quantitative & Computational Finance

Atlanta, Georgia

Aug 2025 – May 2027

M.S. in Computational Science & Engineering

Jan 2026 – May 2027

- Key Coursework: Large Language Model, Machine Learning, Data Mining & Stats Learning, Modeling & Simulation, Algorithms, Data Analysis & Visualization, Derivative Securities, Stochastics Process, Computational Data Analysis

B.S. in Information Systems (Information Technology Management)

Aug 2020 – Dec 2024

- GPA: 3.9 / 4.0 (Highest Honor)
- Key Coursework: Data Analytics, Information Systems, Quantitative Analysis, Financial Management

PROFESSIONAL EXPERIENCE

XINGYE INVESTMENT

Remote

Quantitative Research Intern | Commodities Futures Strategy Team

May 2026 – July 2026

- Sourced and cleaned daily commodity futures data using Python and helped build a factor-selection pipeline (greedy search + correlation filtering) that narrowed 600+ candidates to 50 low-redundancy factors.
- Contributed to a Mixture-of-Experts model to capture factor interactions and reduce overfitting risk across market regimes.
- Backtested crude oil futures factors using linear regression, validating 25+ factors across multiple contract periods.

HALLMARK CARDS

Kansas City, Missouri

Data Engineer | Data Engineering and Analytics Team

Feb 2025 – Jul 2025

- Automated ETL pipelines (scheduled via JCL/CTL on mainframe) extracting and transforming 10M+ monthly CRM records into Snowflake, reducing processing time 30% and enabling demand-forecasting models used by business teams.
- Collaborated with Analytics teams to translate business and technical requirements into structured data solutions, designing field mappings for 20+ product modeling initiatives and validating 500K+ records to improve accuracy 15%.

Data Scientist Intern | Analytics and Project Management Team

May 2025 – Aug 2025

- Built XGBoost and LightGBM demand-forecasting models in Python using CRM and ERP data, including item category and seasonality, benchmarked against a linear regression baseline, improving demand-planning accuracy by 11%.
- Managed 40+ dashboard migrations from MicroStrategy to Power BI, including UAT/QA testing through deployment, and deployed 100+ CRM and PreHR dashboards for globally distributed teams, improving reporting accuracy 20%.

CREDIT ONE BANK

Las Vegas, Nevada

Quantitative Risk Management Analyst | Collections Strategy Team

Jun 2023 – Aug 2023

- Analyzed 6M+ credit card accounts using SAS to identify delinquency trends and quantify risk factors, supporting risk assessment and credit loss mitigation strategies.
- Evaluated monthly performance of 30+ internal and external collections agencies on 2.5M+ delinquent accounts records using SAS and Python, analyzing key risk drivers with heatmaps and improving collections efficiency by 12%.
- Constructed Excel-based financial models to track critical risk metrics (delinquency rate, roll rate, recovery rate), enabling targeted interventions and developing hands-on experience with cost structures, pricing, and revenue analysis.

PROJECTS & RESEARCH

Co-Activation Aware Expert Pruning for Mixture-of-Experts Models

- Investigated whether routing patterns alone can identify which experts to prune in MoE models, finding structural metrics performed worse than random guessing (8.3% vs. 25%).
- Tested all 48 experts through exhaustive ablation and pinpointed one that consistently hurt performance, improving model quality by up to 160 perplexity points when removed.
- Designed a lightweight metric to detect routing sinks without full ablation, confirmed across four domains with 67–100% accuracy.

Research Assistant | Blockchain Technology Research Article

“The Impact of Blockchain-Enabled Smart Contracts on Firms' Operational Efficiency,” Journal of Operations Management (2025)

- Processed and cleaned 600+ data points using Python and Excel to support empirical analysis of blockchain adoption.
- Mapped and analyzed state-level blockchain bills and smart contract regulations, providing quantitative insights into paper.

SKILLS

Programming: Python (NumPy, Pandas, scikit-learn, PyTorch, TensorFlow), SQL, R, C++, SAS, MATLAB

Other Tools: Tableau, Git, Power BI, Alteryx, Excel, Mainframe, Alteryx
